Application Brief

GHG Emissions

Enterprises that fail to accurately calculate their greenhouse gas (GHG) emissions face pressure from regulators and stakeholders, and reputational damage. The Enablon GHG Emissions software application allows companies to collect and report their emissions data, and reduce their environmental impact.

Challenges

Collect Accurate Data

Companies need to accurately collect, analyze and report emissions data, but calculating emissions of complex sites and operations is not simple. Companies need to ensure that they use the correct methodology and that emissions data is auditable. Once the right data has been gathered, accurate calculation still requires the use of the right emission factor for the activity, emitted gas, geographic location and date. Generating external reports is also time-consuming and prone to errors.

Turn Data Into Insights

Most companies also struggle to turn this data into actionable insights that reduce their emissions and energy consumption. Collecting the data is one hurdle, but inflexible reporting tools prevent data consolidation across multiple sites. This results in an inability to perform effective scenario analysis, and to anticipate future GHG emissions with the aim of preventing them.

“
Enablon received two of the highest scores for sustainability management and air emissions management.
”

Verdantix Green Quadrant 2019

 Environment & Sustainability

 Health & Safety

 Integrated Risk & Compliance

 Product Stewardship

Benefits

- ✔ **Manage, report and reduce your GHG emissions** at any level and granularity across your organization by integrating key global emissions standards and protocols.
- ✔ **Ensure compliance** with changing protocols, standards and regulations
- ✔ **Automatically calculate GHG emissions for various protocols and geographies** for Scope 1, Scope 2 and Scope 3 emissions.
- ✔ **Comply with the market-based Scope 2 methodology** and take into account Energy Attribute Certificates, energy supplier emissions factors and residual mix.
- ✔ **Select the appropriate emission factor** based on date and geography.
- ✔ **Better organize your emission inventory** from an organizational and operational scope with granular and structured data collection.
- ✔ **Create reporting templates to save time.**
- ✔ **Monitor your compliance and performance**
- ✔ **Generate standard reports for major protocols**

The Enablon Difference

Enablon, a Wolters Kluwer business, is the world's leading provider of sustainability, EHS, and operational risk management solutions. Around the world, hundreds of companies and millions of users employ our software applications to manage environmental and social performance, minimize risks, and improve profitability.

Most comprehensive platform for EHS, Sustainability and Risk Management

Built on a single technology stack and supporting 100+ EHS and Risk workflows

Recognized as a leader by industry analysts

Best-in-class user experience

Access anywhere, anytime on laptop, tablet and smartphone

SaaS, hosted or on-premise

Flexible technology customizable to each company's processes and organization

Global network of consulting, services, content and technology partners

Largest customer community of its kind (Global conference series, user groups, workshops...)
